

The neighboring links in the bisector frame, $T = 4 \rightarrow 5$ (bisector link = link 4)

$T = 4$

Start when $T = n$

bisector point simultaneously
on links 3 and 4

$T = 4.07$

bisector point begins
by moving to the left

$T = 4.13$

$T = 4.2$

bisector near minimum d_1

$T = 4.27$

bisector now moving to right

$T = 4.33$

$T = 4.4$

$T = 4.47$

$T = 4.53$

bisector continuing right

$T = 4.6$

$T = 4.67$

$T = 4.73$

nearing maximum d_1 , will begin
to move left at maximum

$T = 4.8$

$T = 4.87$

$T = 4.93$

bisector point moving left

$T = 5$

End when $T = n + 1$
bisector point simultaneously
on links 4 and 5
