

the whole strip at  $T = 13000$ , as in the previous figure; the shaded half is magnified below

the same joints at  $T = 13000$  (gray) and  $T = 13000.02$  (red): each drifts down by  $\approx 2\Delta T/u$  cycles

the speed overlay  $\mu(n) = l'(T)\log(n/(n - 1))/2\pi$ , log scale:  $\mu = 4$  at  $u = 1/2$ , and  $\mu = 2$  at the fold, off panel to the right
