

Links crossing at $\sigma = 1/2$, $T = 6.18$ ($t = l(T) \approx 279.85$, $m = 6$, $a = \sqrt{t/2\pi} = 6.674$, $a^2 = 44.54$)

(a) the two chains and the seven crossings the law names

(b) one sweep of the reverse chain, links 30–89, laid on forward link 0

(c) the crossing pairs lie on a hyperbola; the sum rule is its tangent at the fold
